

# SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

## Project Overview

### Project Name

### Integrated Second-Hand Car Selling Ecosystem

The project consists of two independent applications:

#### 1. Public Website

Purpose:

- Customer-facing platform for buying and selling second-hand vehicles.
- Focused on marketing, lead generation, vehicle listings, and customer engagement.

#### Technology (Suggested):

- React.js / Next.js
  - ASP.NET Core Web API
  - SQL Server
  - Responsive Design
  - SEO Optimized
- 

#### 2. Management Software (ERP & CRM)

Purpose:

- Internal business management software for employees, sales teams, finance teams, and administrators.
- Manages all business operations, inventory, accounting, CRM, finance, HR, and reporting.

#### Technology (Suggested):

- React.js
  - ASP.NET Core Web API
  - SQL Server
  - Windows/Web-based ERP
- 

## Communication Between Systems

The Website and ERP will communicate through secure REST APIs.

Example:

Website

↓

API Gateway

↓

ERP Database

Whenever:

- Customer submits enquiry
- Customer books test drive
- Customer applies finance
- Customer uploads documents
- Customer sells vehicle
- Customer registers

The information is automatically transferred to the ERP.

Likewise,

When Admin:

- Adds a new car
- Updates vehicle price
- Marks vehicle as sold
- Adds offers
- Changes stock availability

The website automatically reflects those updates.
